

# Potentials BIG BANG

#04

“Actuality is to potentiality as someone waking is to someone sleeping, as someone seeing is to a sighted person with his eyes closed, as that which has been shaped out of some matter is to the matter from which it has been shaped”

“If the world has begun with a single quantum, the notions of space and time would altogether fail to have any meaning at the beginning; they would only begin to have a sensible meaning when the original quantum had been divided into a sufficient number of quanta. If this suggestion is correct, the beginning of the world happened a little before the beginning of space and time.”

“This, the sceptics claim, is not merely impossible but clearly insane, which is why the advertising executives of the star system of Bastablon came up with this slogan: “If you’ve done six impossible things this morning, why not round it off with breakfast at Milliways, the Restaurant at the End of the Universe?”

“Big Bang is coming. The universe is blowing up into thousands of pieces. Or is it reassembling into the original quantum? It’s a matter of time and it’s a matter of space.”

“Don’t be sceptic! Play Battiato forward and backwards. Then again forward, and again backwards.”

“Build up the structure, then fill it, then clean it out. Hop on the train, and miss it.”

“Now, give us your personal Big Bang. Just before the beginning. Just after the end.”

## GRAVITY

The wind is behind, the sun is shining, but after having found DJT impressed on a white slate, we need to go back to what is really necessary.

In August 1665, 23-year-old Isaac Newton move to the family farm in Lincolnshire to escape the plague that was spreading across England. On the 18th month spent waiting for the reopening of the university, Isaac, inspired by the fall of an apple (or as the legend goes), associated for the first time gravity to the motion of the moon. For almost twenty years, this initial intuition of the law of universal gravitation was not published, nor presented, nor discussed anywhere.

While Isaac continued his silent struggle to explain the behaviour of gravitational force, Edmond Halley, still didn't have any answer to how the celestial bodies move.

In 1684 Halley visited the University campus in Cambridge where Newton was living and studying for already thirteen years.

At the question whether he had any mathematical theory regarding the ruling forces between celestial bodies, Newton replied he had found this formula some five years before.

"I deduced that the forces which keep the planets in their orbs must [be] reciprocally as the squares of their distances from the centres about which they revolve"

All that was necessary was finally there: the right time, people, explanations. In 1687, with the example of the "cannon ball", Newton explained the force of Gravity to the world and lead the future for space exploration.

A Midsummer's Night Dream

The seconds pass so  
quickly suspended in the air.

The wind that cuts my face is fresh. The forest,  
the city, my old school, my colleagues, Aunt Dora's dog, the  
fur that formed in her navel, always. Memories lived, passed, passed  
tireless, quick, one after the other. Not even the time to finish one thought  
takes shape in my head. The wind keeps me up. I think: I can get confused.  
Ah pigeons, what useless creatures, stupid animals. Yet I am a person who looks  
but I do not understand the usefulness of the existence of pigeons on this world  
animals, I think everyone hates them!

Again: the jams of the neighbor when I lived in that chaotic Rome, the memory  
of the French house, the large windows of the hall that gave onto the courtyard  
Rotterdam. I lived through lives eh. Carlo, Luigi, François ... think that  
was even Elettra. Ahahahahaha, what a strange woman's life. The feeling of  
discrimination: if you're beautiful everyone looks at you, if you're ugly  
hope to be smart, otherwise you're fucked. What injustices that the past  
two years I was tired, too much effort and so I went back to being a man.  
I look around: I'm still on the twenty-third floor. Meeting the eyes of the woman  
who is washing the windows, she smiles at me. What a beautiful life: you see  
people around, on the street, in shops, at work, everywhere and with you  
we exchange something from a smile, a look, a dirty word. Yes I come

in the ugly category of people who like to say bad words, I find them very  
But I dose them, do not abuse them, they too are expensive, and

certain circumstances require them. Like that time when I jumped  
my roadster, and an army of swallows shit on me an army of  
I go down fast, maybe I rush. I seem to be jumping: go up high  
get down quickly! Trampolines were my drug until the tender  
ten. I always wanted to have one at home but it remained a dream  
a hammock. He had bought two hammocks, but they remained  
packaged, then, once moldy, I had to throw them away.

A blow, a strong blow on the hand, I feel a weight on my fingers  
is mumbling something. I'm no longer suspended but resting on  
surface, someone jumps next to me making me move from  
side, bloom bloom. I'm jolted. Daddy I hug  
get up and start my Monday.

## il PESO della GRAVITÀ

**A** parlare di gravità o di  
Italia ci si sente co  
parlare di guerra a Sa  
negli anni '90. O di bon  
Hiroshima. O di eruzioni a Po  
Ci si sente dentro. Crollano pa  
chiese, scuole, perfino ponti. P  
parlare dei governi, della fi  
dell'unità. E così ci si sente in  
sospesi tra una legge della fisic  
pulita e astratta, e i calcinacc  
realtà, che crollano.

Eppure lo si sa, pure qui, in  
come funziona. Question  
masse e di distanze, e si sa  
che bisogna rispettarla e on  
quando erigiamo le nostre  
Cerchiamo quindi tra i calc  
l'origine della colpa, i co  
di quell'imperdonabile *hubr*  
confronti della natura. M  
qualcosa che sfugge quando p  
la gravità, crudelmente coer  
precisa, ci crolla sulla testa.

E si scopre, allora, che seppur s  
legge della fisica, come tutte l  
che si rispettano, anche la gra  
valida solo fino a prova con  
Parola di Karl Popper: è falsifi  
Proprio come la colpevolezza  
importa che sia vera, ma c  
oltre ogni ragionevole dubbio.  
è lì che vacilla, pronta a croll

E così  
are, la

nostra fiducia nella gravità, e nella giustizia.

E si scopre anche che, nel costruire i nostri palazzi, chiese, scuole e ponti siamo tenuti a garantirne la solidità, ma per un periodo, di vita. E ci sentiamo ingannati oltre che dal mondo teorico anche da quello fisico. Il suo limite non è la falsificazione, bensì il tempo. Lo raccontano i calcinacci di un'architettura già morta da anni, ben prima di crollare.

E si scopre, ancora, che se la gravità non basta a capire la natura, men che meno può bastare a prevederla.

Ci sono terremoti che non siamo riusciti ad anticipare, e frane che non si possono arginare. Così ci sentiamo ingannati anche dalle tecnologie, dal progresso, dagli esperti, dai media, che hanno contribuito a distrarci, e portarci a guardare la facciata mentre si corrodevano, lente, le fondamenta.

E si scopre, infine, che ci sono gli uomini, stupidi, impotenti, fallibili, vulnerabili, deboli di fronte a questa gravità. O forse questo lo si sapeva già. Che ci sono infinite Cassandre, rare portatrici della verità, destinate a non essere credute. E Sisifi che, per la loro astuzia abusata, si trovano a raccogliere pietre per l'eternità. E Icari, che volano troppo in alto, per poi cadere.

Così vediamo allargarsi quella faglia, piano, piano. Il quadrato della distanza cresce, sempre di più. E la forza di attrazione si riduce, tra chi sta sulle opposte sponde ad assistere allo spettacolo, tra Nord e Sud, tra italiani e migranti, tra stato e giustizia, tra un prima e un dopo... E ed è ben difficile capirsi, con tutto quel vuoto in mezzo. L'altro lato è troppo lontano per sentire, e capire che esistono problemi ben più gravi della gravità. Ed è più grave anche non saper reagire, non trovare accordi politici, non trovare accordi economici, non trovare un senso.

La verità è che qui in Italia non l'abbiamo mai capita la gravità. La usiamo male quando non serve, non la usiamo quando serve. E proviamo a negarla, aggirarla, eluderla come qualsiasi altra legge, sempre più spaventati dalla sua ineluttabilità. Ma, accecati nello sforzo estremo di combatterla, non ci accorgiamo che anche lei, la gravità, è, proprio come piace a noi Italiani, un po' sbagliata e approssimativa. Che si arrangia nella vita quotidiana per risolvere i problemi, talvolta semplificando, talvolta mentendo, in alcuni casi perfino agendo per inerzia.

Eppure Newton ci aveva avvertito: "non sono stato in grado finora di scoprire la causa di queste proprietà della gravità". E, dopo di lui, ci ha avvertito perfino Einstein. Di quanto è relativa questa gravità.

Non ci resta che capire se si cade in verticale  
o in orizzontale

Bernard Tscumi:

To really appreciate architecture,  
you may even need to commit  
a murder.

Architecture is defined by the actions it witnesses  
as much as by the enclosure of its walls. Murder  
in the Street differs from Murder in the Cathedral  
in the same way as love in the street differs from  
the Street of Love. Radically.
